

## Environmental Policy

ATSYS is committed to operating in an ecologically sustainable manner and identifying all environmental impacts resulting from our activities.

ATSYS will comply with all applicable environmental laws and regulations and, where no specific regulations exist, ATSYS will adopt appropriate responsible standards.

We believe that all employees have an important role to play in achieving our environmental objectives. ATSYS encourages respect for the environment and will ensure all employees comply with the principles of our environmental management system, specifically including the prevention of pollution and waste, wherever possible. ATSYS is committed to:

- continually improving our management of the Environmental System - specific objectives and targets will be established which will be regularly reviewed and, more formally, during management review
- use of appropriate environmental products and other environmental technology, minimal use of non-reusable resources, including paper and energy, minimising waste, developing viable recycling opportunities and offsetting all flights with carbon offsets
- ensuring suppliers and sub-contractors comply with this Environmental Policy

To achieve this ATSYS has developed and implemented an Integrated Management System which complies with the requirements of ISO 9001:2015, ISO 14001:2015 and ISO 45001:2018. Quality, environmental and safety objectives are established and regularly monitored through management meetings and formal management review to facilitate continual improvement.

This Environmental Policy and the Integrated Management System that has been implemented are fully supported by management and it is the responsibility of staff to ensure they are understood and implemented at all levels within ATSYS.
